SUMMARY

Final-year Computer Science and Engineering undergraduate. Two completed internships shipping production platforms end to end across React, TypeScript, Python, FastAPI and PostgreSQL, plus measured LLM/GenAI security work in agent containment, concurrency control and application security.

EDUCATION

Indian Institute of Information Technology, Sri City
Bachelor of Technology in Computer Science and Engineering

August 2023 – May 2027
Sri City, Andhra Pradesh

EXPERIENCE

Full Stack Developer Intern

May 2026 – August 2026

Krea University

Remote

- Shipped the pilot release of PRISM, a health-research data management platform, end to end across React, FastAPI and PostgreSQL, taking a live data-collection workflow from schema design to production UI.
- Secured sensitive research records by designing role-based access control (RBAC) and multi-factor verification aligned with India's Digital Personal Data Protection (DPDP) Act, 2023.

Full Stack Developer Intern

January 2026 – April 2026

Cymax

Remote

- Built Unity Stream, a secure VR streaming platform, delivering in-browser immersive sessions with React and A-Frame/WebXR across multiple headset targets.
- Protected stream and session data with AES-256 encryption and built multi-headset session management for concurrent devices.

PROJECTS

Perimeter — LLM Agent Security Proxy

github.com/kumarswamyg2005/Perimeter

Python, Model Context Protocol (MCP), DeBERTa, ONNX Runtime, Docker, pytest

- Cut indirect prompt-injection success from 100% to 0% across a self-authored 213-payload, 9-technique, 1,264-trial benchmark by building a transparent MCP proxy that enforces capability scoping and taint-based containment on every LLM agent tool call.
- Proved through a 4-arm ablation that policy-level containment blocked 100% of attacks at 1/80th the latency of a DeBERTa ONNX classifier, holding 99% benign completion at +0.34 ms p95; shipped with 71 tests, mypy strict and CI.

DesignDen — Custom Clothing E-Commerce Platform

github.com/kumarswamyg2005/Designden

React, Redux Toolkit, Node.js, Express, MongoDB, Redis, Three.js, Docker

- Built a full-stack MERN platform with 5 role-based dashboards (customer, designer, manager, delivery, admin) and a Three.js 3D studio for garment customization.
- Cut product-query latency by 97% with Redis caching and 14 MongoDB indexes, and shipped a Docker and GitHub Actions CI/CD pipeline gated by 84 passing Jest unit tests.

Forewarn — AWS Risk-Notice Platform

github.com/kumarswamyg2005/Forewarn

AWS CDK v2, TypeScript, Lambda, DynamoDB, Cognito, Bedrock

- Built a serverless AWS platform turning live weather forecasts into deterministic 4-level risk notices, schema-validating every LLM-written number so a model can never alter the computed level.
- Enforced a 16-invariant threat model with least-privilege IAM checked by CDK assertion tests, and proved atomic quota enforcement under 10 concurrent requests; shipped with 163 tests.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML/CSS

Frontend: React, Next.js, Redux Toolkit, Three.js, A-Frame/WebXR, Tailwind CSS, Vite

Backend: Node.js, Express, FastAPI, Socket.io, REST APIs, JWT Authentication

Databases: PostgreSQL, PostGIS, MongoDB, Redis, Prisma ORM

GenAI and LLM Systems: Model Context Protocol (MCP), prompt-injection defense, retrieval-augmented generation (RAG), vector search, ONNX Runtime, LLM evaluation

Tools and Platforms: AWS (Lambda, DynamoDB, CDK, Bedrock), Docker, Docker Compose, GitHub Actions (CI/CD), Git, pytest, Jest, Stripe, Vercel

Concepts: Concurrency Control, System Design, Application Security, AES-256 Encryption, Unit Testing
